# 10 Simple Ways to Save Water

# **1. Follow your local water use restrictions.**

The most important thing you can do during times of drought is to follow your local water municipalities' current water restrictions. You can even get ahead of the curve and begin to conserve before restrictions are needed.

# **2. Refit your plumbing.**

Either replace fixtures with newer, low flow models or install water-saving devices. Place a water-filled bottle in your toilet tank to reduce the amount of water needed to fill it.

# **3. Check for leaks and repair them.**

Leaks can amount to about 15 percent of all household indoor water use.

# **4. Use indoor water wisely.**

Approximately half of all indoor water is used in the bathroom. Turn off water while lathering, shaving and brushing your teeth.

# **5. Know your plumbing.**

Take time to locate your main water shut-off valve and the water meter in your yard.

# **6. Use dry cleanup.**

Instead of hosing off your driveway and patio, use a broom to sweep away debris.

# **7. Take advantage of free water.**

Catch rainwater from your gutters and use it to water your flowers and vegetables. Collect water from the bath/shower while waiting for it to heat up; use for watering plants.

# **8. Use appliances wisely.**

Run washing machines and dishwashers only with full loads to maximize efficiency.

# **9. Use a commercial carwash that recycles water.**

Hosing your car off in the driveway can waste a significant amount of water.

# **10. Avoid using sink disposals for food scraps.**

Disposals can use around 11 gallons of water per minute, plus they can add 50 percent to the volume of solids in your septic tank.
